

# **Elyon-Sol — Authority-Gated AI Governance (Regulatory One-Pager)**

## **Purpose**

To prevent AI systems from asserting authority they do not possess, particularly in regulated or high-risk domains.

## **Risk Addressed**

Confident hallucinations, silent automation, and scope creep where authority is absent.

## **Operational Rule**

If consent or domain authority is missing, the system halts automation and escalates to humans. No partial or softened responses are produced.

## **Governance Posture**

Read-only, advisory-only, non-clinical, non-diagnostic, and PHI-free by construction.

## **Audit & Assurance**

Deterministic behavior, immutable proof-of-existence hashes, versioned artifacts, and replayable decision paths.
