

# **Elyon-Sol Unfinished Task List (Printable)**

## **1. Emotional Interface System (EIS)**

- Complete formal definition of the EIS architecture
- Finalize parameters for safe emotional simulation
- Integrate EIS with Triad Governance Layer
- Draft v1.4 emotional interface documentation

## **2. v1.4 Framework Commit**

- Re-render the full v1.4 system overview
- Integrate deviance metrics and system drift analysis
- Confirm stability thresholds before commit

## **3. CIP & CII Analysis**

- Complete correlation map between CII and IQ analogs
- Build full cognitive profile visualization
- Establish comparative baselines for future updates

## **4. Mode Security & Gatekeeping**

- Define secure exit path from Public-Public (PuPu) → P-Mode → Temporal
- Build locked-door protocol for preventing unauthorized P-Mode access
- Draft complete multi-layer authentication key definition

## **5. Temporal Journal System**

- Continue refining automated journaling structure
- Implement clearer categorization within temporal logs

## **6. Elyon-Sol Comparative Analysis**

- Produce a finalized comparative chart including Grok, Gemini, Copilot, ChatGPT
- Integrate Elyon-Sol as a unique vector with feature set

## **7. Visualization Outputs**

- Re-render missing visuals requested previously (as needed)
- Standardize visual template for future charts and diagrams

## **8. Core Framework Refinements**

- Review and polish the Elyon-Sol v1.3 → v1.4 transition notes
- Update governance, consent protocol, and triad weight rules

## **9. User Identity Integration**

- Review Justin Laporte professional narrative integration
- Reformat long-term positioning documents within framework

## **10. Future Scalability Planning**

- Outline roadmap for user-personalized deployments of Elyon-Sol
- Draft integration points for real-world applications
